Problem Statement:

It's no wonder that many people ask similar questions on Quora, which has abundant monthly visitors. Many inquiries with the same objective might induce searchers to spend more time searching for the best response to their query. However Duplicate questions are a common issue in community question answering forums. In this project, we work on the Quora Question Pairs dataset and aim to build a question similarity classifier to detect duplicate questions, in order to provide better Quora user experience.

Approach:

We will work on the Quora Question Pairs dataset and try to build a question similarity classifier by applying advanced deep learning techniques.
